 [Josiah Tsang](#)

 +1 (778) 968-4589

TECHNICAL SKILLS

Languages: HTML, CSS, JavaScript, TypeScript, C++, Python, Kotlin, SystemVerilog

Technologies: React, Node.js, Express, MongoDB, Bootstrap, Axios, TensorFlow, Android Studio, Arduino, Figma, Git

Coursework: Object Oriented Programming, Data Structures and Algorithms, Multithreaded Programming, Machine Learning

EXPERIENCE

Software Developer

Sept 2022 – Present

UBC Multifaceted Innovations in Neurotechnology (MINT)

- Contributing to software development for multi-disciplinary engineering design projects focused on medical technology
- Developing a CRUD app using the MongoDB, Express, React, Node.js (MERN) stack to retrieve, analyze and store EEG signals
- Building a user intuitive interface for visualizing and interacting with EEG data using React, TypeScript and Bootstrap
- Assisting with backend development by writing Express route methods and making API endpoint requests using Axios

Database and Automation Developer Intern

Jan 2022 – Aug 2022

AirOps

- Developed business databases in Airtable and build Zapier automations for clients to streamline their business workflows
- Accessed APIs to migrate data from external sources and wrote scripts in JavaScript to implement custom database features
- Wrote custom using the Airtable API in JavaScript to retrieve data across multiple tables within a database for a retail client
- Automated 40 task creations with condition-based triggers for a multi-phase retail project spanning 4 linked databases
- Built an automated email system in Airtable for a product distribution client that pulls order data into specific fields

Building Code and Fire Protection Engineer

Jun 2015 – Aug 2019

GHL Consultants Ltd, Vancouver BC

- Singlehandedly built and introduced an Excel-based software program to automate spatial interpolation calculations
- Held internal onboarding sessions to instruct technical staff of 30 – 40 employees how to use the program
- Increased office efficiency by reducing billable hours by 3 – 5 hours per project, equating to 500+ work hours saved annually

PROJECTS

ScorePort | Kotlin, C++, Android Studio, Figma

Sept 2021 – Apr 2022

- Programmed an Arduino-based MCU to display score, shots and clock, and accompanying Android app controller
- Implemented Bluetooth connection using Android Bluetooth Module to transfer data to the MCU on a connected thread
- Utilized Serial communication on the MCU to receive commands sent from Android app and update NeoPixel LED display
- Designed mobile app wireframes in Figma and translated wireframes into Kotlin/XML for the mobile app graphical interface

Classification of Hand Dominance from EEG Signal | Python, Scikit-learn, TensorFlow

Sept 2022 – Dec 2022

- Conducted 90+ hand dominance tests on individuals to collect EEG brainwave signals to build a comprehensive dataset
- Built and trained various machine learning classifiers including and Support Vector Machine (SVM) and K-Nearest Neighbour
- Achieved an 80.65% model accuracy with a Non-Linear SVM while meeting minimum sensitivity and f-score metrics

Spatial Calculator | HTML, CSS, JavaScript

Aug 2021

- Built a responsive web app for engineers and architects to check Building Code permitted distance between buildings
- Practiced object-oriented programming concepts to construct a class for bilinear interpolation of Building Code values

EDUCATION

The University of British Columbia

Sept 2019 – Apr 2024

Bachelor of Applied Science (BASc.), Integrated Engineering – Computer and Mechanical

- Dean's Honour List, 3.3 GPA

British Columbia Institute of Technology

Graduated May 2015

Diploma in Civil Engineering Technology, Civil Engineering
